Server based computing network in just a few mouse clicks

The 2nd Edition of the Remote Desktop Suite has a Best Practice Wizard and innovative sales concept to enable setup of a secure Remote Desktop environment within minutes

(Berlin, February 2006) In front of 200 partners at the fourth ThinPrint International Channel Conference in Berlin, ThinPrint, the experts for infrastructure solutions and for printing in distributed networks, announced the Second Edition of the Remote Desktop Suite Standard. The software targets small and middle-sized businesses that want to set up a low-cost, secure server based computing architecture using Microsoft Terminal Services with Windows Server 2003. The Best Practice Wizard is an extremely easy-to-use program that allows businesses to turn a Windows Server 2003 into a secure Remote Desktop environment incl. print management and certificate based SSL encryption in only 5-10 minutes. The solution is just as easy to get as it is to install. A new and innovative eChannel concept ensures fast availability on the websites of ThinPrint sales partners.

The installation is complete in just a few steps. The Best Practice Wizard enables Terminal services and sets up the .print print management. Key to the product is the automatic creation of the security settings, including set up of the firewall and SSL certificates. Once server installation is complete, an individual installation package (.msi) is automatically created from the system. This completely preconfigured file can quickly and easily be distributed to all workstations for which secure remote access is to be made possible. Thanks to the ThinPrint DRIVER FREE PRINTING technology, the user can print immediately to any printer; e.g., on his home computer.

“With this solution, it is possible for every small or middle-sized business to have a low-cost, secure server based computing architecture, with which employees in the local network have the same high performance access to central applications as the employees working from home,” explains Carsten Mickeleit, Managing Director of ThinPrint GmbH.

The retail price of the Remote Desktop Suite Standard for 5 users or devices without Update Service will be 990 euro net; so-called Extension Packs for 5 users or devices each will cost 450 euro net.

Already scheduled for release in February of this year, the solution will be available online from ThinPrint eChannel partners.
